Question: 1

When configuring SNMPv3 with an ACL, what is the main objective?
Response:

A. To increase network throughput
B. To define which devices are allowed to send SNMP traffic to the managed devices
C. To remove encryption from SNMP packets for faster processing
D. To use default community strings for simplicity

Answer: B

Question: 2

In the Modular Policy Framework (MPF), what is the purpose of creating a class map?
Response:

A. To define the maximum transmission unit (MTU) sizes
B. To classify traffic for subsequent policy enforcement
C. To configure interface-specific IP addresses
D. To allocate bandwidth uniformly across all traffic

Answer: B

Question: 3

Why is SCP preferred over FTP for secure file transfers in network management?
Response:

A. SCP does not require a username and password
B. FTP provides end-to-end encryption
C. SCP uses SSH for data transfer, providing encryption and security
D. FTP is faster than SCP, thus less secure

Answer: C

Question: 4

Which type of malware is specifically designed to encrypt files on a victim's device and demand payment in exchange for the decryption key?
Response:

A. Virus
B. Worm
C. Trojan
D. Ransomware

Answer: D

Question: 5

What advantage does a cloud-based network topology offer over traditional WAN implementations?
Response:

A. Lower initial setup costs due to shared resources
B. Physical control over all hardware and data storage
C. Requires more IT staff for maintenance
D. Slower data transfer speeds

Answer: A

Question: 6

In a Cisco environment, which command is used to display the current state and configuration details of an active IPSec VPN tunnel?
Response:

A. show crypto isakmp sa
B. show ip interface brief
C. show version
D. show running-config

Answer: A

Question: 7

During the configuration of an IPSec site-to-site VPN, what role does the pre-shared key serve?
Response:

A. It dynamically generates user credentials.
B. It authenticates the identity of each site to the other.
C. It encrypts the data traffic over the VPN.
D. It specifies the routing protocol to use.

Answer: B

Question: 8

When configuring administrative access on a Cisco router using TACACS+, what is crucial?
Response:

A. Setting the router to use the least-privileged user mode
B. Specifying the TACACS+ server addresses and key
C. Disabling local fallback authentication
D. Configuring the router to serve as a TACACS+ server

Answer: B

Question: 9

How can you verify that the IOS resilient configuration is properly implemented on a Cisco router?
Response:

A. By checking the version of IOS installed
B. By rebooting the router to check if it retains its configuration
C. By executing the command show secure bootset
D. By observing network traffic flow for anomalies

Answer: C

Question: 10

What is typically the focus of network design in a data center?
Response:

A. Ensuring that data can be transferred internationally without lag
B. Maximizing operational efficiency and redundancy
C. Facilitating external customer access to corporate resources
D. Prioritizing low-cost solutions over performance
